

# SUPA-TRAC (REGULAR)

Supa-Trac Regular is a true all-rounder in the world of medium-duty flooring systems offering resilience, versatility, and a wide range of different applications

**Supa-Trac Regular is a medium duty system that not only provides excellent ground protection for pedestrian access; it can accommodate moving vehicles with an axle weight of up to 3.5 tonnes.**

Ground dependent, Supa-Trac Regular can also withstand a high level of static loading - approximately 70 tonnes per m<sup>2</sup>.

This system can be used to protect a multitude surfaces, and it is especially invaluable for areas guaranteed to take the greatest punishment, for example, front-of-stage at rock concerts or as a base for heavy-duty crowd barrier systems.

For Construction, Supa-Trac creates safe and secure ground cover for the transit of both pedestrians and vehicles. It can also convert most ground surfaces into safe, stable parking areas for cars and other light vehicles, or form a reliable foundation for temporary buildings and other structures.

Supa-Trac Regular has also been used by the military to extend areas of operation across difficult, inhospitable terrain and to create a safe and stable landing surface for helicopters.

Supa-Trac Regular can be quickly installed and extracted. The non-slip flooring panels can be configured into any size or shape and, when removed, may be stored either indoors or outdoors ready to be used again. Cleaning Supa-Trac is easy too, a quick hose down is all that's required.

**Material:** Nucleated Polypropylene Co-polymer

**Ambient Temperature range:** -49 to +50 °C

**Panel size:** 920mm x 230mm x 34mm

**Max Gross vehicle weight:** Up to 2,500kg\*

**Resistant to UV damage.**

**Max Static:** Up to 70,000kg per m<sup>2</sup>

**Panel thickness:** 34mm

**Self draining:** Inert and non-conductive.

**Panel weight:** 2.025kg (9.7kg/m<sup>2</sup>)

**Traction :** Anti slip surface.

**Resistance to corrosion:** Resistant to solvents and non-corroding.

**Suitable Surfaces:** Turf, Soil, Sand, paving, concrete, gravel, snow, grass.

**Manually deployed:** Can be laid in straight runs or pads. Deployment of up to 70m<sup>2</sup> per hour per man. No special tools or expertise are required.

\*Ground dependant. Please seek advise if vehicles are to be used
